

Odoo ERP: Automated QC Quantity Synchronization

- **Project Name:** Odoo ERP Customization - Manufacturing QC.
- **Document Type:** Functional Design Specification.
- **Author:** Septarina.
- **Tech Stack:** Odoo ERP, Python (Logic), PostgreSQL (Database structure).
- **Module Name:** `manufacturing_quality_control`.
- **Dependency:** Manufacturing.
- **Menu Path:** Manufacturing > Operations > Manufacturing Orders.
- **Logic Trigger:** Sync `Quantity` field in list view with `Finished Good` value from production.

1. The Challenge

The client's production team found that the standard Odoo Inspection view did not provide immediate clarity on production output. They needed the **"Quantity"** field in the tree view to automatically synchronize with the **"Finished Good Quantity"** to speed up decision-making for supervisors.

2. My Solution (Functional Design)

As the lead analyst, I translated this operational pain point into a precise technical blueprint:

- **System Analysis**
Identified the dependency within the `manufacturing_quality_control` module.
- **Functional Specification**
Defined the exact menu path (Manufacturing > Operations > Manufacturing Orders) and the necessary logic triggers for the developers.
- **Bridge to Development**
Provided clear instructions on changing the `QUANTITY` value logic in the list view to ensure 100% data alignment with finished goods.

Module Name: manufacturing_quality_control

Is an Existing Module: ☒ (If checked, then edit the module, if unchecked, create new module)

Dependency: Manufacturing

****NOTE: Please copy the Module Details below to the module's actual description so it can be viewed in Apps****

Module Details:

1) Change Quantity in Inspections into Finished Good Quantity

Menu Item	Manufacturing > Operations > Manufacturing Orders		
New / Existing Object	New / Existing Menu Item	Access Rights to New Object / Menu Item	Form View Fields (Add / Edit / Hide / Remove)
Existing	Existing	Existing	
View Filters	Views Available (Form, List, Kanban, Calendar, Pivot, Graph, Gantt)	Kanban View Fields (Only if you have Kanban View)	List View Columns (Only if you have List View)

Functions, Buttons, Triggers, Schedulers, Onchange events & other remarks

1. Change QUANTITY value in tree view Inspections into Finished Good quantity value

INSPECTION NUMBER	RESPONSIBLE	TEST	QUANTITY	PRODUCT	PICKING	LOT	SUCCESS	STATE
☐ QC-000130	Administrator	ok?	15.00	Kue Kering 00			☐	Ready
☐ QC-000131	Administrator	ok?	15.00	Kue Kering 00			☐	Ready
☐ QC-000132	Administrator	ok?	15.00	Kue Kering 00			☐	Ready

Manufacturing Orders / MO/00570 / Work Orders / WO1138 / Inspections / QC-000132

Test: ok? Date: 09/04/2020 07:00

Responsible: Administrator Success: ☐

Reference: WO1138 Auto-generated: ☐

Quantity: 15.00 Choose more:

Product: Kue Kering 00 Finished Good: 5.00

Picking: Lot or scrap Good: 0.00

Lot: Material Consumed: MCD0001

Questions: Notes

QUESTION	QUESTION TYPE	QUALITATIVE VALUE	QUANTITATIVE VALUE	ITEM	VALID VALUES	SUCCESS?
ok/valid	Qualitative		0.00000	ok		☐

Figure 2: Detailed Functional Specification for Module Customization.

3. The Impact

- **Reduced Manual Error:** Eliminated the need for staff to manually verify quantities between different views.
- **Efficient Delivery:** By providing a structured functional document (including form view fields and access rights), I reduced the development turnaround time and ensured accurate system delivery.

Final Reflection

This project demonstrates my ability to navigate the full lifecycle of ERP customization—from identifying operational bottlenecks to delivering a production-ready functional blueprint. By prioritizing data synchronization and clear technical documentation, I ensure that the system not only meets technical requirements but also serves as a reliable tool for real-time business decision-making.

I am committed to delivering excellence through structured analysis, ensuring every customization adds measurable value to the organization's efficiency.
